

DAY 14

Prompt Engineering for Project Managers

Learning Objectives:

- Understand how AI tools can accelerate PM documentation and planning work
- Learn effective prompt writing for PM tasks: requirements, meeting notes, reports, emails
- Understand the limitations of AI in PM work: judgment, stakeholder nuance, context
- Build a reusable PM Prompt Library for daily use
- **YouTube Search Terms:**
 - "Prompt engineering for project managers"
 - "ChatGPT for project management"
 - "AI tools for PMs 2025"
 - "How to write better prompts"
- **Recommended Channels:**
 - AI Jason
 - Google Project Management Certificate
 - Lenny's Podcast

Tasks:

- Sign up for Claude (claude.ai) and ChatGPT (openai.com) free tiers — understand that these are tools that accelerate your work, not replace your thinking and judgment as a PM
- Practice generating PM documents with AI — use prompts to draft a project status report, generate a risk register for a given scenario, write a stakeholder communication email, and summarize a meeting transcript — critically evaluate every output before using it
- Practice using AI for sprint planning support — prompt it to break a PRD feature into user stories with acceptance criteria, estimate story points, and identify dependencies — then review and correct what it gets wrong
- Build a PM Prompt Library in a Google Doc with 12 reusable prompts covering BRD drafting, PRD user stories, MoM writing from bullet notes, status report generation, risk identification, stakeholder email drafting, sprint goal writing, retrospective facilitation questions, change request impact analysis, and project plan outline

Deliverable

- PM Prompt Library — 12 prompts with example outputs
- Before/after comparison: your raw notes vs AI-polished MoM showing what AI added and what you had to correct
- Short note: 3 PM tasks where AI genuinely helps and 3 where it cannot replace human judgment

PM Prompt Library (12 Reusable Prompts)

USE CASE	PROMPT
1. BRD Drafting Prompt	Act as a Business Analyst. Create a Business Requirements Document for [Project Name]. Include business objective, problem statement, stakeholders, scope, assumptions, constraints, success criteria, and high-level requirements.
2. PRD User Stories Prompt	Act as a Product Owner. Convert the following feature description into user stories with acceptance criteria using the Given-When-Then format. Feature: [Feature Description].
3. MoM Generation Prompt	Convert the following meeting notes into a professional Minutes of Meeting document. Include attendees, agenda, discussion summary, decisions made, action items, owners, and due dates. Notes: [Paste Notes].
4. Status Report Prompt	Create a weekly project status report using the following information. Include overall health, completed work, upcoming tasks, risks, issues, blockers, and stakeholder updates. Data: [Project Information].
5. Risk Identification Prompt	Analyze the following project scenario and create a risk register with risk description, probability, impact, mitigation plan, owner, and status. Scenario: [Scenario Details].
6. Stakeholder Email Prompt	Draft a professional stakeholder email explaining the current project status, key achievements, risks, and next steps. Tone should be professional and concise.
7. Sprint Goal Prompt	Based on the following sprint backlog items, generate a clear sprint goal that aligns with business value and customer outcomes. Backlog: [Items].

8. Retrospective Facilitation Prompt	Generate retrospective questions using Start-Stop-Continue, 4Ls, and Mad-Sad-Glad formats for a software development team.
9. Change Request Impact Analysis Prompt	Analyze the following change request and identify impacts on scope, timeline, budget, resources, dependencies, and project risks. Change Request: [Details].
10. Project Plan Outline Prompt	Create a project plan outline for [Project Name] including phases, milestones, deliverables, dependencies, risks, and estimated timeline.
11. Sprint Planning Support Prompt	Break the following feature into user stories, estimate story points, identify dependencies, and suggest sprint allocation. Feature: [Feature Description].
12. Executive Summary Prompt	Create a one-page executive summary for senior leadership using the following project information. Highlight progress, business value, major risks, and required decisions. Information: [Details].

Before/After Comparison: Raw Notes vs AI-Polished MoM

Raw Notes

- Login feature discussed
- Testing delayed
- Raj fixing API issue
- UAT next week
- Need client approval
- Security review pending

AI-Polished MoM

Meeting: Login Feature Progress Review

Date: 25 June 2026

Discussion Summary

- Team reviewed progress on the login feature.
- Testing activities are currently delayed due to an unresolved API issue.
- Raj is working on fixing the API integration problem.
- User Acceptance Testing (UAT) is planned for next week.
- Client approval is required before production deployment.
- Security review remains pending and must be completed before release.

Decisions

- Proceed with UAT once API issue is resolved.
- Schedule client approval meeting before deployment.

Action Items

Action	Owner	Due Date
Resolve API issue	Raj	ASAP
Complete security review	Security Team	Before UAT
Arrange client approval meeting	PM	This Week

→What AI Added

- Structured format
- Meeting summary
- Decisions section
- Action items table
- Professional wording

→What Had to Be Corrected

- Actual due dates
- Accurate owners
- Context not present in notes
- Any assumptions made by AI

3 PM Tasks Where AI Genuinely Helps

1. Documentation Creation

AI can quickly generate BRDs, PRDs, status reports, and meeting minutes, reducing manual effort.

2. Meeting Summarization

AI can convert long meeting transcripts into concise summaries, decisions, and action items.

3. Sprint Planning Support

AI can suggest user stories, acceptance criteria, dependencies, and potential risks for backlog items.

3 PM Tasks Where AI Cannot Replace Human Judgment

1. Stakeholder Management

AI cannot fully understand stakeholder emotions, relationships, or organizational politics.

2. Decision Making

Project decisions often involve trade-offs, business priorities, and strategic considerations that require human judgment.

3. Conflict Resolution & Negotiation

Managing team conflicts, negotiating scope, and handling difficult stakeholder conversations require interpersonal skills that AI cannot replace.
